‹ether.camp› and Cloud9 collaboration releases Ethereum Studio.

As of today, Ethereum Studio is live and available for the developers community as a live web service. Ethereum Studio is a collaboration of C9 and <ether.camp>. A combined R&D effort which launches today a feature rich tool for developing smart contracts and unstoppable applications.

Ethereum Studio is an intuitive, in-cloud modern development environment. By removing the need for time consuming installations, configuration and updates, developers have instant access to everything they love about high quality desktop editors with all the convenience, flexibility and power of the cloud. From language support and project sharing to live collaboration and workspace customization, Ethereum smart contract developers have a seamless, more productive experience developing for the cloud—entirely in the cloud.

"we are launching today Ethereum Studio - A powerful tool for developing anything on the Ethereum blockchain. It is a great addition to the ECO system of development tools that <ether.camp> provides for the entire crypto community." said Roman Mandeleil CEO & Founder of <ether.camp>

"Ethereum is a real breakthrough project in the crypto community space and we are happy to make our tools available for the community of decentralized application developers." Said Ruben Daniels CEO of Cloud9.

About <ether.camp>

<ether.camp> is the Ethereum full stack provider company famous for Ethereum(J) - Java implementation of the Ethereum protocol and live.ether.camp the analytic smart Ethereum network explorer. Ethereum Studio is the famous web development tool for Ethereum smart contracts.

About Cloud9

Cloud9 provides a development environment in the cloud that allows developers to get started with coding immediately and collaborate with their teams, students and peers. With over 1 million workspaces created, Cloud9 IDE lets developers build and run applications in the cloud dramatically faster than in local environments. With one-click integration with GitHub and BitBucket repositories, Cloud9 supports hundreds of programming languages including Python, Ruby, PHP, Javascript and Go, as well as the most popular frameworks such as Meteor, Django, and Wordpress. Cloud9 IDE is used by thousands of organizations in dozens of countries, from emerging brands to Fortune 500 enterprises.

Cloud9 was founded in Amsterdam in 2011 and currently has offices both in Amsterdam and San Francisco. Previous investors include Accel Partners, Atlassian, and Balderton Capital.

About Ethereum

Ethereum is a decentralized Blockchain protocol that executes smart contracts: applications that run exactly as programmed without any possibility of downtime, censorship, fraud or third party interference.

Ethereum is how the Internet was supposed to work.
